CAREER OBJECTIVE

Full Stack Software Developer with a passion for using Python and Django to find elegant and efficient solutions to business needs. I am focused on continuing to learn, improve and grow to contribute to the long-term goals of my team and company.

PROFESSIONAL EXPERIENCE

Merchant Support Assistant, Ross Stores NYBO, Manhattan, NY
November 2017 – Present

- Enter between 20%-30% of division's approved spending orders every week.
- Input and process predesignated SKUs grossing as much as 400K for retail price markdown every month.
- Generate and format various business reports for Buyer weekly VP meetings.
- Apply the use of MS Excel formulas and features to simplify order input data prior to entry.
- Perform typically between 300-400 order edits per week including everything from financial updates to product data-capture changes.
- Assist import/non-domestic purchase order teams with order entry and edits.

Developer, Antandre.com, New York, NY
September 2015 – May 2016

- Integrated fraud and chargeback protection features such as AVS and CVS validation using Signifyd API.
- Added admin event notifications to track the review, approval etc. of credit cards with Signifyd webhooks.
- Implemented easy to use email marketing through MailChimp.
- Collaborated with CEO to deploy sales approach using PlusMargin.
- Improved cart to allow customers to apply promotions to merchandise.
- Made various updates to models, layout, functionality and data capture throughout the site.

Developer, Musae.me, New York, NY
August 2015 – November 2015

- Teamed with senior software engineers to create front end UX (User Experience) using Atomic Design methodology from patternlab.io.
- Created database models for user profiles.
- Developed mobile responsiveness for iPhone, Android and tablet.
- Built url mapping for easy site navigation.
- Utilized Slack and Google Hangouts to maintain remote communication.

Developer, General Assembly, New York, NY
November 2014 – February 2015

- Built Ruby On Rails (RoR) World Cup wiki using Google API for location and Facebook OAuth for login authentication.
- Performed RoR testing of model, view and controller code/logic using Test Helper gem.
- Teamed with other developers to create a web app that displays a curated list of popular comedians from a PostgreSQL database.
- Developed chatroom app using Node and other technologies (see resume projects section).
- Applied the use of Ajax calls for updating web pages without browser reload.
- Constructed back end servers in Sinatra.
- Designed apps using front end framework Bootstrap3.
